

6 ESSENTIAL FIRE SAFETY SERVICES FOR SCHOOLS

Like any business, schools and educational premises are subject to fire safety legislation. This is to help protect both staff and students alike. So what are the key fire safety services schools really need?

Here's our list of six core services and equipment that your school building should have to help save lives in a fire-related emergency:

Let's take a look:

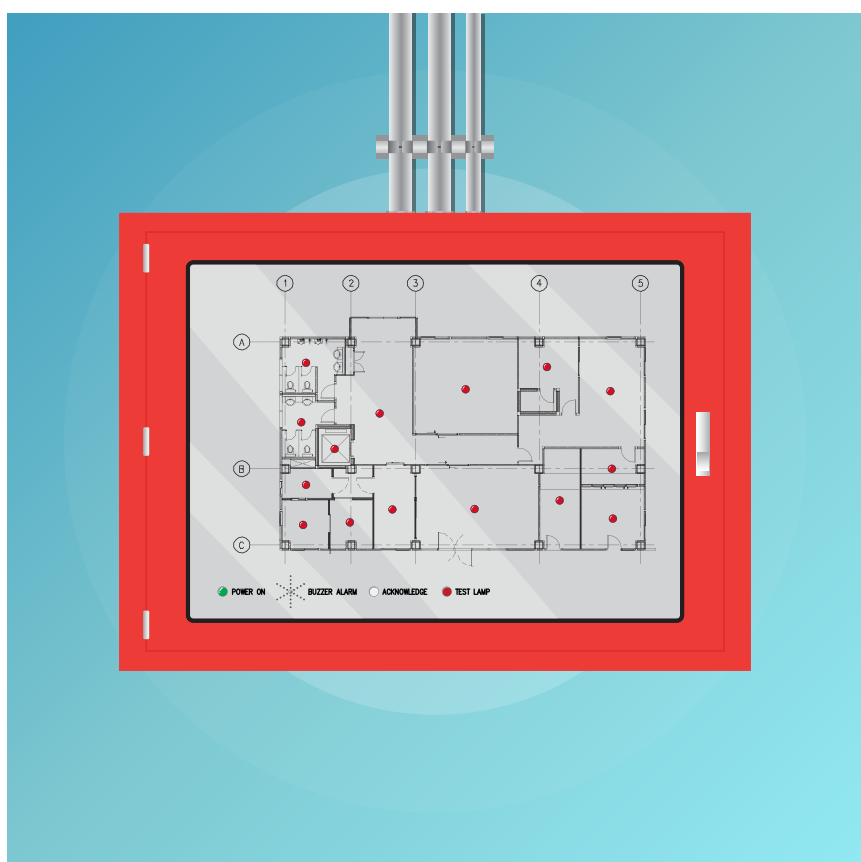

01

FIRE DOORS

Creating safe evacuation routes while slowing down the spread of smoke and fire. Must be well maintained and should never be propped open.

02

FIRE ALARM SYSTEMS

Tailored to your building to give early detection and warning of fire, allowing enough time for people to exit calmly.

03

FIRE EXTINGUISHERS

Different extinguisher types to suit the potential risks and sited in appropriate areas of the school, e.g. science labs.

04

FIRE SAFETY TRAINING FOR STAFF

Training for evacuation plans and for dealing with fire safety issues, regardless of whether they are official wardens or not.

05

EMERGENCY LIGHTING

Providing guidance lighting in an emergency to minimise panic and confusion.

06

FIRE RISK ASSESSMENTS

Full assessments of the risks in your school and identifying any vulnerable parties so that you can improve on fire safety.

At Surrey Tech Services Ltd, we provide a range of fire safety services for schools in London and the Home Counties - including fire risk assessments and the supply and installation of fire doors and fire alarm systems.
