About Us

Founded in 2014, we wanted to take the complication and hassle out of finding a reliable fire safety contractor. Our end goal is always to help businesses, local authorities and landlords keep people safe and meet legal obligations.

That’s why at Surrey Tech Services Ltd, we serve as qualified and approved contractors for London and the home counties.

We’re BAFE-accredited and all our engineers hold a City & Guilds NVQ Level 3 qualification, with apprentices always working towards this. That means you can trust our team to provide you with the advice and guidance you require.

We offer 24-hour support for when you need us most and have an expert team to carry out all site surveys across the region. Book a service contract or a one-off appointment with us today and let us make fire safety simple.

Our Sectors

All businesses and organisations face the challenge of keeping people safe from fire, whether that’s the prevention of fire, early warnings or protection from a fire during evacuation. But every building or commercial operation is different, with unique risks and considerations.

No matter what industry you work in, we have the knowledge and skill to help. The following are just a few of the sectors we commonly work in:

Education

Commercial

Residential

Local Authority

Public Sector

HMOs

From helping hospitals and schools to find and maintain the right fire alarm, to advising office blocks and landlords about fire safety hazards, we tackle the risks most specific to your industry and your building.

Some of Our Clients

Throughout our years of service, we’ve helped a variety of businesses, local authorities and commercial organisations, including:

- Runnymede Borough Council
- Spelthorne Borough Council
- London Borough of Lewisham
- City of London Council
- Sykes & Sons Ltd
- Blue Jelly Ltd
- Dulwich Prep School London
- Harris City Academy
- Sir Francis Drake Primary School
- Marston Properties
- IWG plc
- Sainsbury’s
- Vabel Ltd
- Domus Group
- Kier Group
- Royal Holloway University
- Imperial College London
- Fronrunner Logistics
- Forest Estate Agents
- Haart Estate Agents
- Townsend Estate Agent
- Unilever

Fire Alarms

An early warning from a fire alarm allows people to get out of a building safely and calmly in an emergency. But fire alarms are also part of your legal responsibility to reduce risk and protect people in your premises. That's why we certificate all the work we carry out, for your records and your peace of mind.

We provide a range of fire alarm systems, tailored to the unique needs of your building, along with maintenance and servicing to make sure they're always in top condition and to reduce the number of false alarms.

You can opt for:

- an **addressable fire alarm**, to pinpoint the exact location of a fire.
- a **conventional fire alarm system** that indicates zones/areas of the fire.
- a **wireless fire alarm**, for a tidier installation that you can adapt or add to further down the line with minimal disruption.

In addition, you can monitor your fire alarm with a monitored fire alarm, so that the alarm is raised and action is taken even when no one is around.

We set high standards for installation and thorough testing, but we also offer fire alarm maintenance and servicing to help keep your system in top condition, protecting lives and keeping your business legally compliant.

Fire Alarm Servicing & Maintenance

Only a working fire alarm can save lives. That's why it's important to have professional servicing and maintenance carried out on your system. We provide monthly, quarterly and annual maintenance packages with fully documented servicing history.

We ensure that our work and your business meet the standards and legal requirements set out in BS 5839, and the following are just some of the tasks we may undertake during a maintenance appointment to keep your system in top condition:

- Load testing
- Battery testing
- Contact with receiving centre (where applicable)
- Systems checks
- Logbook checks
- Detector checks
- Interface unit checks

Not sure which type of fire alarm you need for your building? Our professional experts will be happy to discuss your requirements and can also arrange a servicing and maintenance schedule for any new or existing system.

Maintenance appointments can vary in length depending on the age of the system, the size of the building and previous servicing history, but it's recommended that you have the fire alarm in your building inspected at least every six months. We're always happy to arrange a maintenance schedule to suit your operations and can provide advice if you're unsure of what frequency you need.

All this helps you keep people in your building safe and your business compliant with the law, but it can also help to reduce the number of disruptive false alarms.

Fire Doors

Fire compartmentation is the use of physical structures in your building to limit or slow the spread of fire. Fire doors, therefore, are a crucial part of this, blocking flames and smoke when closed and ensuring they protect evacuation routes long enough for people to escape safely.

At Surrey Tech Services Ltd, we provide a variety of resistance levels in the fire doors we supply, depending on how long your doors need to resist fire for. We install internal fire doors and external fire doors with the following ratings, with the numbers corresponding to how many minutes of resistance they give:

FD30
Fire Doors

FD60
Fire Doors

FD90
Fire Doors

FD120
Fire Doors

All installations by our team are in line with British Standard 8214 and our doors are compliant with British Standard 476-22, giving you full confidence in our service and the integrity of your building.

Whether you know how many doors and what level of resistance you need or not, you can always call upon our expertise to protect your building and the people within.

Emergency Lighting

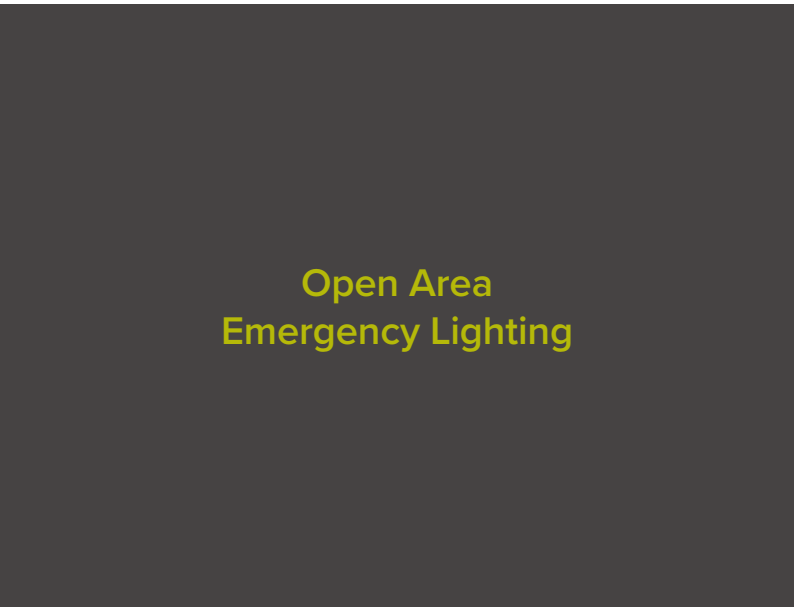

Giving people safe direction in an emergency and avoiding a sense of panic is crucial. Emergency lighting not only helps to save lives, but it's also a legal requirement for all business premises.

With our team of in-house designers, we can ensure you have the right level of coverage to meet the needs of your building. We provide emergency lighting installation, maintenance and testing to help you keep your logbooks up to date for insurance purposes.

We're NICEIC-approved for your peace of mind on any electrical work and can recommend the right type of lighting to suit the layout and purpose of your building, including:

Escape
Route Lighting

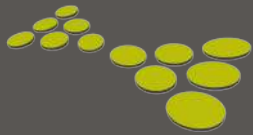

Open Area
Emergency Lighting

High-risk
Task Area Lighting

Standby
Lighting
